

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph no. [0116] of the published application with the following amended paragraph:

In order to compare the effects of the piezo-electric actuator of Example 7, a conventional piezo-electric acoustic element was fabricated, as illustrated in FIG. 19. This acoustic element has a piezo-electric element 1101a', a metal plate 1105g', and vibrating film 134f that is similar to that of Example 7, and was attached to the piezo-electric actuator (see FIG. 13) of Comparative Example 1. The fabricated acoustic element presented a resonance frequency of 796 HZ, a Q-value of 37, and a sound pressure level of 79 dB.
